

Speech intelligibility.

TinyEYE Europe has developed a special online program.

Refugees can improve their speech intelligibility in Dutch to the desired level within a few months, using online speech exercises.

Different than a language course.

Being able to speak clearly is essential for refugees if they want to integrate into a new country.

There are plenty of language courses available, but until now there is no one else who can teach the sounds within a new language. TinyEYE combines speech and language learning.

Approach

The TinyEYE speech therapists specializes in the treatment of articulation and language problems in non-native speakers.

TinyEYE Europe uses tailor-made speech and language games that are practiced live with a speech therapist on a laptop, tablet or smartphone.

The games have been developed by multilingual speech and language therapists who are specially trained to work online.

The speech and language therapist places the exercises in a secure homework environment after every session. There you can also find instructional videos and personal messages.

What do you need?

All you need is TinyEYE login details! Health care anytime, anywhere.

In the Netherlands, TinyEYE online care is fully reimbursed by health insurances. E-Health is becoming more and more a primary and preferred way of learning.

What are the costs?

There are no additional costs for children up to the age of 18 and for adults who are insured with the Dutch RMA (Medical Care for Asylum Seekers).

Are you older than 18 and insured with a Dutch health insurance other than the RMA? Then take the personal contribution into account (Dutch: Eigen risico).

Queen Máxima also said that she had the most difficulty learning the / ui / sound in Dutch. A diphthong (sound combination) that is very important for good intelligibility!
